## OVERVIEW

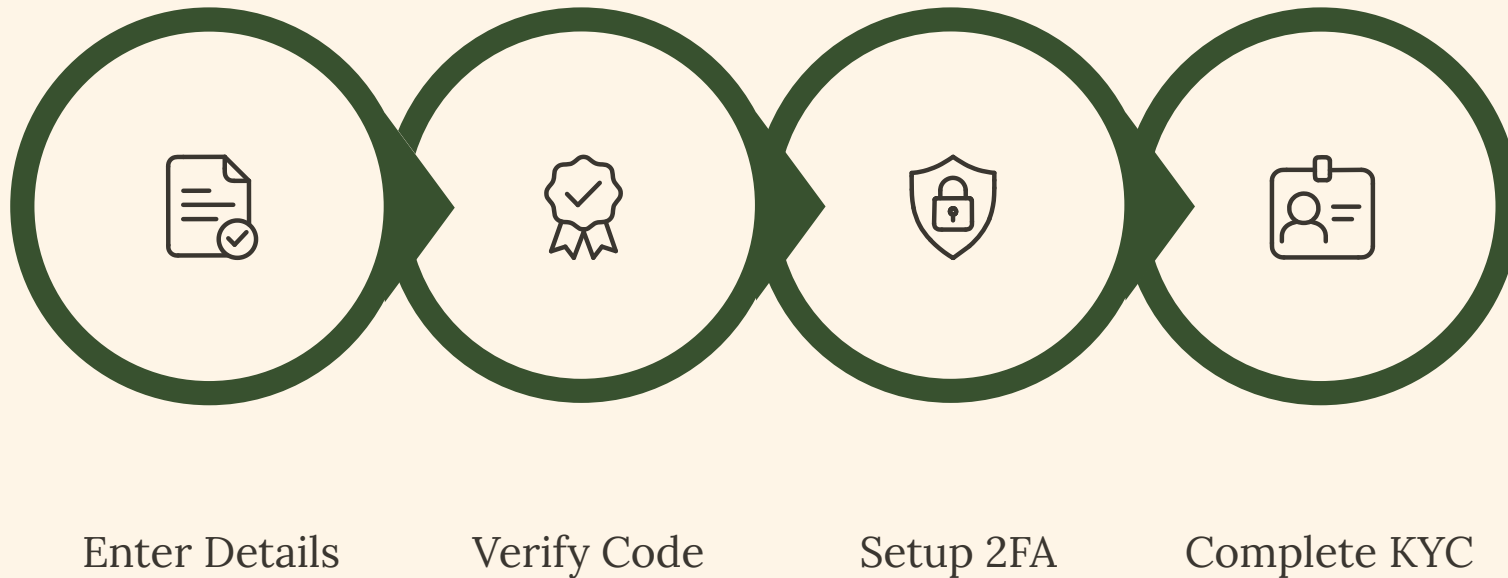

# What Is the Patron Process?

The Patron Process is a structured, end-to-end crypto deposit experience — designed to guide users safely from account registration through to settlement confirmation.

It prioritizes **compliance, clarity, and trust** without adding friction for everyday users — including those with limited crypto experience.

 The flow remains fully secure while being approachable for non-technical users on mobile devices.

# Account Registration & Verification

Users are guided through a clean registration flow with optional two-factor authentication and a built-in KYC verification step — establishing identity and trust from day one.

## COMPLIANCE

# KYC & Account Status Dashboard

Once onboarding is complete, users land on an **Account Status Dashboard** that surfaces KYC validity, verification progress, and security settings in one place — keeping users informed at every stage.

## KYC Status

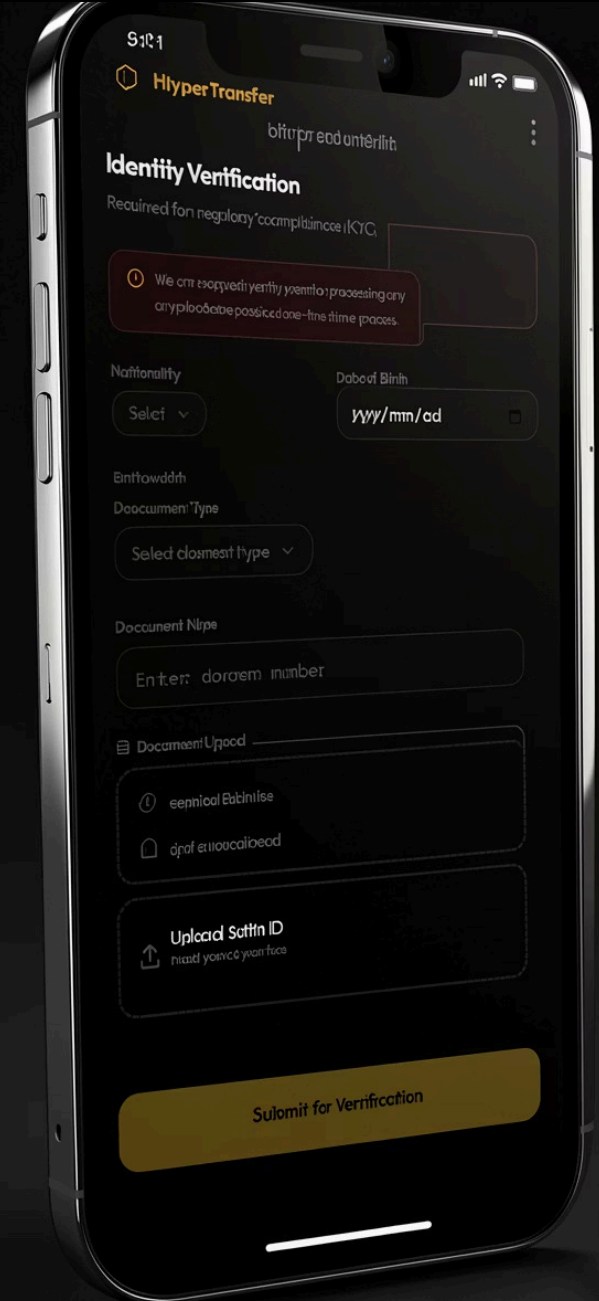

Real-time validity indicator with expiry awareness

## Phone & Security

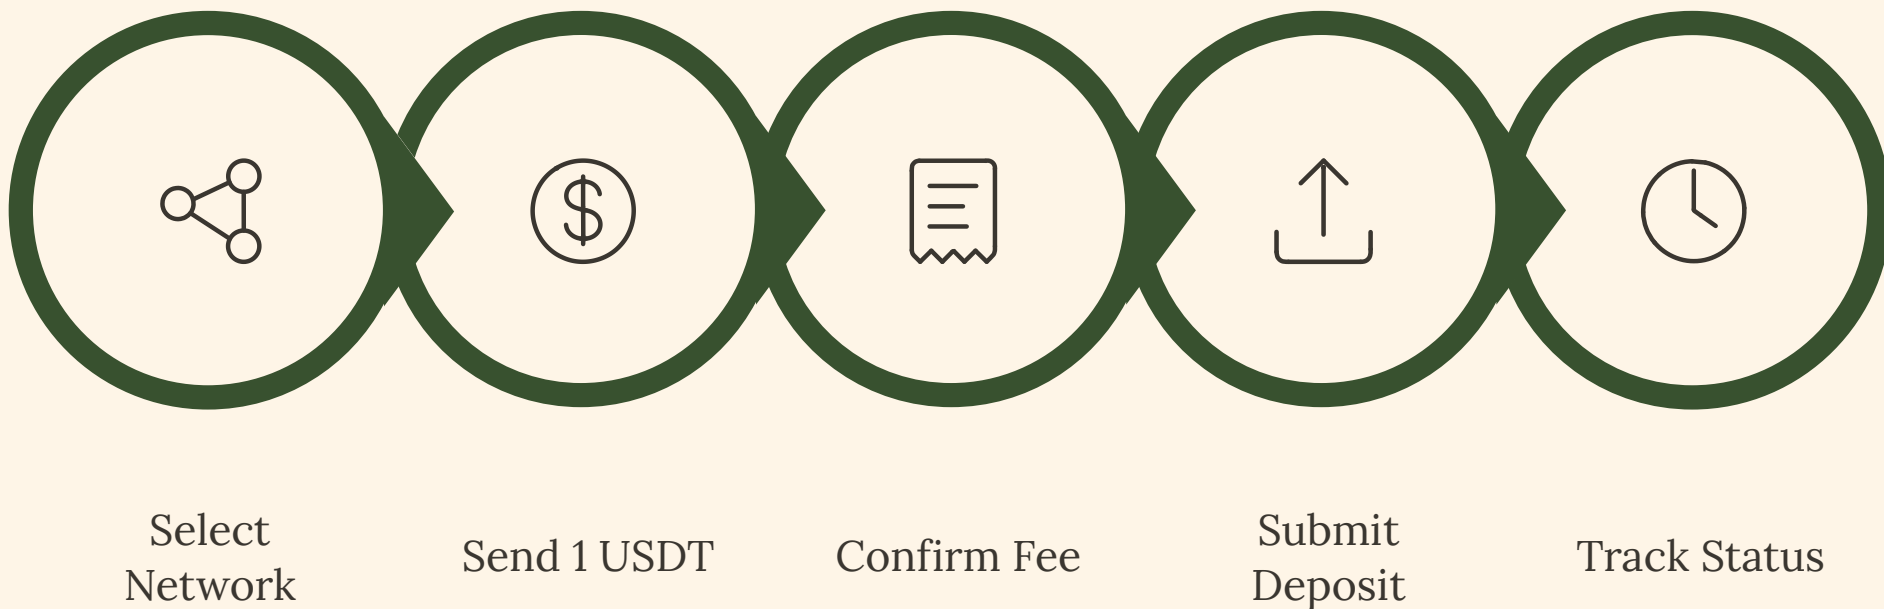

Editable profile with 2FA and contact settings

## Account Health

Clear payment and account status at a glance

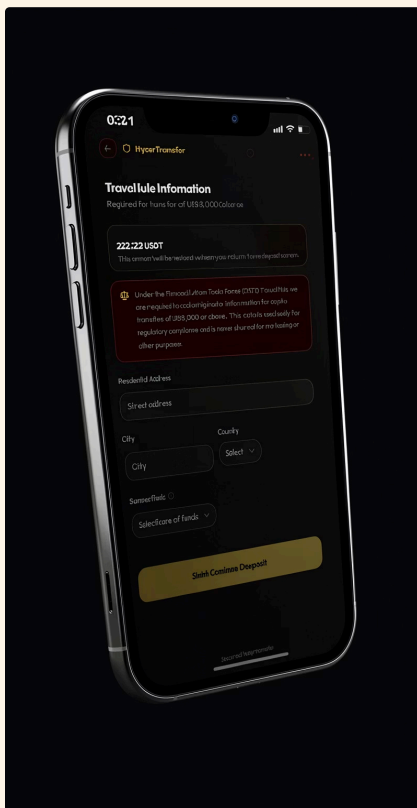

# Guided Crypto Deposit Experience

A micro-deposit of **1 USDT** verifies the destination address before the full transfer — a critical safeguard that prevents funds from being sent to the wrong wallet.

# Travel Rule: Built-In for Large Transfers

For deposits of **USD 8,000 or above**, the flow automatically triggers a **Travel Rule check** — collecting required counterparty information in line with FATF compliance standards.

The check is integrated seamlessly into the deposit steps, keeping the flow cohesive without overwhelming the user.

☐ Compliance is enforced without disrupting the user journey for standard-sized transfers.

# Fees, Confirmations & Settlement Tracking

## Network Confirmation

Users explicitly confirm the deposit address and selected blockchain network before proceeding.

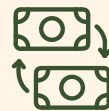

## Fee Summary

A clear breakdown of deposit fees is shown upfront — no surprises at the point of transfer.

## Settlement Status

Real-time tracking of deposit settlement keeps users confident their funds are moving correctly.

## Transaction History

A full log of past deposits and transfers is accessible directly from the user's account.

#### HYPERTRANSFER SUPPORT

e.g., Issue with deposit

##### Message

Describe your issue...

#### SUPPORT

# Multi-Channel Support Built In

Users are never left without help. The Support page offers multiple contact options to match different user preferences and urgency levels.

## FAQ

Self-serve answers to the most common questions about deposits, accounts, and KYC.

## Chat Bot

Instant automated guidance for common queries — available 24/7 without wait times.

## Call Option

Direct phone support for users who prefer speaking with a human agent.

## Message Form

Async support for detailed inquiries that require a written response or documentation.

## KEY BENEFITS

# Why This Flow Works

### Prevents Wrong-Address Errors

1 USDT micro-deposit confirms the destination before any significant funds move.

### Reduces Confusion

Step-by-step guidance removes ambiguity at every point in the deposit process.

### Compliance Without Friction

Travel Rule and KYC checks are woven in smoothly — not bolted on.

### Mobile-First & Accessible

Designed for non-technical users on any device, with a clean and intuitive UI.

NEXT STEPS

# Try the Prototype & Share Feedback

The updated Patron Process prototype is live and ready for review. Test the full flow — from registration through to settlement tracking — and share your observations.

## Access Prototype

Use the trial link to walk through the complete user journey end-to-end.

## Test Key Flows

Focus on onboarding, the 1 USDT verification step, and the Travel Rule trigger at \$8K.

## Share Feedback

Note any friction points, unclear copy, or UX improvements before the next iteration.
